

Code 39

Code Page

Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the barcode being scanned was created using a code page that is different from the one the host program is expecting. If this is the case, scan the barcode below, select the code page with which the barcodes were created and scan the value and the **Save** barcode. The data characters should then appear properly.

Full ASCII On

Full ASCII Off
